PROFESSIONAL SUMMARY

Final-year AI engineering student with two paid placements in software testing and Python-based test automation. Built and evaluated Arabic/English speech systems, NLP models, recommendation engines and data pipelines. Focused on Speech AI, NLP and applied machine learning, with experience deploying APIs and running models on self-hosted GPU infrastructure.

PROFESSIONAL EXPERIENCE

QA Engineer Intern, API Test Automation

July 2026 - October 2026

Quality Perfection, Riyadh, Saudi Arabia · Tamam Project · End-of-year engineering project (PFA)

- Tested the Tamam platform across API automation, AI-generated test scenarios, bug detection and UI automation, documenting more than 80 defects.
- Investigated recurring issues in generated test scenarios, including fabricated field names, incorrect boundary values and an off-by-one error.
- Validated authentication, collection imports, dynamic variables, execution reporting and multi-host API requests using Postman, Swagger and wire-level inspection.
- Built a Python CLI to validate OpenAPI, Swagger and Postman collections, redact credentials and run 44 automated tests.

AI / QA Automation Intern

July 2025 - November 2025

Quality Perfection, Riyadh, Saudi Arabia · Tamam Project

- Built a Python pipeline using Qwen3-Coder, Ollama and LangChain to convert structured test cases into Robot Framework files following a Page Object Model architecture, generating 90 files from 30 test cases.
- Added prompt constraints, response parsing, logging and fallback handling to reduce invalid or unsupported generated automation code.
- Prototyped YOLOv8-based UI detection and compared OCR, Grounding DINO, SAM and vision-language models for extracting test actions from interface recordings, alongside benchmarking of local LLM infrastructure.

EDUCATION

Diplôme d'Ingénieur, Digital Transformation & Artificial Intelligence

2022 - 2027

École Nationale des Sciences Appliquées d'Al Hoceima (ENSAH), Morocco · Final year

Baccalaureate in Mathematical Sciences

2022

Lycée Salah Eddine Al Ayoubi, Marrakech, Morocco

SELECTED PROJECTS

Multilingual Speech & Conversational AI Platform (Arabic/English)

2026

Independent collaborative project

- Built a self-hosted Arabic/English meeting-transcription pipeline combining VAD, speaker diarization, language identification and language-aware ASR routing, with support for code-switching and glossary correction.
- Evaluated transcription and diarization using WER, DER and oracle experiments to measure the effects of speaker overlap, boundary errors and speaker purity.
- Extended the pipeline into Saudi drive-thru and hospital voice agents integrating ASR, Qwen, MCP/API tools and streaming TTS, achieving 2.4-4.6-second end-to-end response latency and passing 46/46 hospital and 16/16 telephone-audio scenarios.

Tech: Python, PyTorch, NeMo, SpeechBrain, Qwen, vLLM, FastAPI, MCP

Arabic Multi-Task NLP: NER, POS Tagging & Coreference

2026

- Trained a multi-task model on a shared AraBERT-v2 backbone with task-specific heads for NER, POS tagging and coreference resolution, reaching 83.89% NER F1 and 97.21% POS accuracy.
- Combined several Arabic corpora into one training pipeline, ran ablation studies and tested zero-shot performance on Moroccan Darija.
- Served the model through FastAPI with a right-to-left Arabic web interface.

JOB INTELLIGENT: Data Engineering & Job Market Analytics [GitHub](#)

2026

- Built an Airflow pipeline ingesting more than 2,000 job postings daily from nine sources, stored across a Bronze/Silver/Gold architecture on Azure Data Lake and PostgreSQL.
- Extracted skills from postings with NLP and matched them against parsed candidate CVs using Sentence Transformers, with results reported in Power BI.

SkincareAI: Machine Learning Recommendation Platform [GitHub](#)

2025

- Built a recommendation engine over 1.15M product reviews combining five models, including DistilBERT for review analysis, neural collaborative filtering and a Vision Transformer for image analysis.
- Added SHAP explainability so each recommendation shows the features behind it, and deployed the system with FastAPI and React.

TECHNICAL SKILLS

Programming: Python, SQL, Java, JavaScript

Machine Learning: PyTorch, Scikit-learn, Transformers, DistilBERT, Vision Transformer, LightGBM, SHAP, YOLOv8, OpenCV

NLP and Speech: AraBERT, Sentence Transformers, NER, POS tagging, coreference resolution, ASR (Cohere, Qwen), TTS, speaker diarization (NeMo Sortformer, ECAPA-TDNN), VAD (Siltero), language identification (VoxLingua107, SpeechBrain), WER, DER

LLM Systems: Qwen, Qwen3-Coder, GPT-OSS, LangChain, Ollama, vLLM, MCP, prompt engineering, self-hosted GPU inference

Data Engineering: Apache Airflow, ETL, medallion architecture, PostgreSQL, MongoDB, Azure Data Lake, Power BI

Backend and Tools: FastAPI, REST APIs, OAuth2, Docker, Git, Linux, Streamlit, React

Testing: Robot Framework, Selenium, Postman, OpenAPI, Swagger, JSON Schema, Jira

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 AI Foundations Associate (1Z0-1122-25), Oracle, 2025
- One Million Prompters, AI Prompt Engineering, Dubai Centre for Artificial Intelligence, 2026
- Arduino Training Certification, 2024

LANGUAGES

Arabic (native) · French (fluent) · English (fluent)
